

# AI Knowledge Assistant for Elchai Group

## Selected Model/Tool

Qwen

## Short Explanation of the Selected Model/Tool

Qwen is an open-source large language model developed by Alibaba Cloud. It can understand and generate human-like text, answer questions, summarize documents, assist with coding, and automate repetitive tasks. For Elchai Group, Qwen can improve productivity by helping employees quickly access company knowledge and documentation.

---

## Practical Project

### AI Knowledge Assistant

This project is a prototype landing page that demonstrates how an AI-powered knowledge assistant can help employees instantly search company documents, SOPs, technical manuals, and internal knowledge using natural language. The landing page includes the problem, solution, benefits, workflow, departments that benefit, risks, and final recommendations.

---

## Use Case for Elchai Group

Employees can ask questions such as:

- How do I deploy OpenClaw?
- Where is the IT policy document?
- What is the onboarding process for new employees?

The AI assistant searches internal documents and provides quick, relevant answers, reducing manual searching and improving productivity.

---

## Departments That Benefit

- Engineering
- IT / Infrastructure

- Product
  - Operations
- 

## **Risks and Limitations**

- Privacy of confidential company documents
  - Hallucination risk (AI may generate incorrect answers)
  - Integration with existing company systems
  - Model accuracy depends on document quality
  - Local hardware and deployment costs
  - Reliability requires continuous monitoring and updates
- 

## **Final Recommendation**

It is recommended to deploy the AI Knowledge Assistant as an internal pilot project within one department first. After evaluating accuracy, security, and employee feedback, the solution can be expanded to other departments.
